

BALANCE / SCALE

Code : G90X

- Balances and scales are fundamental instruments for accurately measuring the mass of specimens or materials, serving as a critical preliminary step for subsequent calculations in both laboratory and field testing environments.
- Selecting the appropriate capacity and readability is essential to ensure the balance meets both general-purpose applications and specific requirements outlined in international standards for various testing procedures.
- Modern balances offer features such as battery and mains operation, under-weighing mechanisms, and taring facilities to enhance versatility and user convenience.
